HIGHLIGHTS

- Major project funding discussions actively continued with potentially interested strategic partners to expand Citigold’s production-ready Charters Towers Gold Project (Gold Project).

- The very substantial work and studies, including previous test mining, support the Company’s view that the Gold Project can provide a long and profitable mine life for the Company, shareholders and local community.

- The Company continues to review its business plan, schedules and strategies with operational and capital cost efficiencies an ongoing focus.

- In January 2020 project design activity increased with an optimisation review underway for the Central underground layout, to potentially bring forward first gold production and efficiently ramp up production.

- Quarter saw a focus on the upside potential for exploration areas held by the Company that surround our production leases that have along strike potential for extensions of existing mineral resources. Mineral Resources and Ore Reserves remain unchanged during the period.

- The Company has a substantial inherent value in its large high-grade Charters Towers gold assets, and we are focused on unlocking that value for shareholders.

- Our aim is to be a 300,000 plus ounces per annum ultra-low-cost gold producer in five years using state of the art technologies and efficiencies, all with the aim of returning substantial profits to shareholders in harmony with the local environment.
OPERATIONS

Planned Resumption of Mining

Corporate plans for the resumption of mining remain unchanged with the main ‘Central Mine’ underground to be the first area planned to be reopened.

The underground mining operations at the Company’s Charters Towers ‘Central’ and ‘Imperial’ mining areas remained on care and maintenance during the quarter, with no gold production.

Designs and strategies for the Central Mine continued to be refined during the quarter.

The ‘Central’ underground is to be the focus of future mining operations and is the area planned to be reopened, and expected to be a major contributor to our aim of being a 300,000 plus ounces gold producer within 5 years.

Resumption of mining at Charters Towers is contingent on a sufficient level of capital financing, with active planning continuing during the quarter.

The Charters Towers Gold Project is the Company’s prime focus.

Citigold’s go-forward business plan is an outsourced model. This approach can bridge the usual ‘growing pains’ involved in expanding by internally building a staffing team. There is a core team at Citigold with a clear plan to develop the mine, and they can engage external consultants and contractors to undertake all of the relevant tasks. An outline of the mining plan for the Central mining area has been given in previous reports. The early development plan is, in summary:

- The Central Decline (access tunnel) extension is to be extended by circa 1,000 metres roadway length down to a vertical depth of 360 metres. Initial mining is expected to be at a relatively shallow circa 300 metres depth.
- The first gold reefs (lodes) scheduled to be opened are the C03W, C38 and C39 and then move on to C05E. Access tunnels (ramps and crosscuts) to the C03W, C38 and C39 will come off the Central access tunnel extension, and gold reef access tunnels (drives) will be driven at nominal 20 metre vertical levels along the length of the reefs to provide closely-spaced grade control samples.
- Gold ore extraction (stoping) will commence once these levels are developed, and a second ventilation and emergency exit (egress) are established.

With this solid data foundation to build on, the remaining project funding will be mainly used for the underground development, tunnelling and materials handling systems for the ‘Central’ mining areas.

The very substantial work and studies, including previous test mining, support the Company’s view that the Charters Towers project can provide a long and profitable mine life for the Company, shareholders and the local community.

We continue to plan for the resumption of underground mining at the Central mine. We will be focused on beginning to deliver on our announced strategy. Your Company has a substantial inherent value in its large high-grade Charters Towers gold assets.

ABOVE: The gold ore at Charters Towers is visually very different to the host granite rock, and therefore relatively easy to follow for miners when excavating the tunnels in the ore in preparation for stoping (ore extraction).
**ABOVE TOP:** Photo of Citigold’s Central mine site and the entrance to the underground ramp portal.

**ABOVE:** Shows the gold areas to be mined in **PINK** and, the **BROWN** areas were previously mined.

**GREY** lines are 1 kilometer grid spacing, large gold deposit is in **PINK** and mining gold starts at shallow 300 metres deep.

The above diagram is based on estimates of mineral resources. The material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.
GEOLOGY AND EXPLORATION

The Quarter continued to see an ongoing focus on the upside potential of our exploration areas for extensions of resources adjacent to production leases.

During the Quarter, assessment continued on the frequency of the payable sections of past mining. Reassessment of geological information collected by the Company has lead to the geological conclusion that the payable sections of the reefs may be more frequent and/or closer spaced than previously thought. This new assessment means that there will be an ongoing reassessment of much of the surface and underground data collected.

A field trip looked at accessing future drilling areas, with a substantial budget for drilling in the Company’s forward plan and budget. The Company’s knowledge base of the Charters Towers reef systems is unique in the world due to the very large investment to date in all facets of exploration, including data collection, drilling and underground test mining data.

During the Quarter, no new exploration drilling was undertaken.
The Company has been optimising its mineral land holdings at Charters Towers with the aim of focusing on the core gold mining operations, and the exploration of the surrounds both along strike and down dip of the defined and yet to be defined reef systems. The fullest exploration of the Charters Towers goldfield is planned. Substantial exploration funds are budgeted for in our overall go-forward budgets.

Regulatory reporting and compliance continued during the Quarter.

**Mineral Resources and Ore Reserves**

Citigold’s Mineral Resources and Ore Reserves for the overall Charters Towers Gold Project are reported in accordance with the Australasian JORC Reporting Code 2012.

The Company’s prime focus is the Charters Towers Gold Project. The Project comprises of the 11 million ounce gold deposit, with an Inferred Mineral Resource of 25 million tonnes at 14 grams per tonne gold and 620,000 ounces of gold in the Probable Ore Reserve (2.5 Mt @ 7.7 g/t Au at a 4 g/t cut-off) (see ASX announcement dated 21 May 2012 Mineral Resources and Reserves report). Mineral Resources and Ore Reserves remain unchanged during the period. The material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

**Research and Development**

Overall, Citigold’s innovation program in mining and exploration is driven by finding what is useful and works at Charters Towers, rather than what is applicable to the general industry.

Renewable energy is planned, over time, to become the primary energy source. Modern renewable energy and battery storage systems provide benefits not available a decade ago. Interest is being explored with external parties about the potential supply of renewable energy to the mining operations. There is the potential for a captive energy for the mining operations only and or the ability to export larger quantities above the mines own needs.

The Company is currently considering further developing previously trialled technologies for wider application with the Company’s forward exploration program at Charters Towers. Citigold’s innovation efforts and achievements will assist the faster definition of the high-grade gold areas, and the formation of our automation and development plans is still continuing.
The Company plans to become a net-zero emissions underground mine over time. The underground is planned to optimise the use of electricity underground, eventually eliminating diesel engine power and its associated pollution.

This will make for a safer and cleaner air working environment. Furthermore, this then results in reduced energy use for powering the ventilation fans that are used to counter the effect of diesel engines that pollute the same air humans need to breathe. Diesel consumes oxygen and generates substantial excessive heat and airborne particulates.

HEALTH, SAFETY, COMMUNITY AND ENVIRONMENT

There were no Lost Time Injuries, significant environmental, health or safety issues during the quarter.

There were no reportable environmental incidents during the quarter. The Company’s project strives for good environmental operations and continues its pleasing record. These favourable achievements, on the ground, are assisted by the relatively benign chemical properties of the local rocks and the operational care taken at the sites.

The Company's Lost Time and Disabling Injury Frequency Rate (LTIFR and DIRF) remains at zero. Citigold is committed to creating and maintaining a safe environment, both at the workplace and in the local community.

CORPORATE

Financial Highlights

The Annual Report as at 30 June 2019 was released during the Quarter. Citigold incurred a net loss of $2.47 million for the year (2018: profit of $13.3 million).

The net assets of the Company were $100 million as at 30 June 2019 (2018: $101 million).

As previously announced, the Company completed a broad shareholder $1.21 million capital raising in the previous period and post Quarter end raised a further $100,000, confirming the continued support of investors and shareholders.

Preparation of the Half Yearly Report as at 31 December 2019 has commenced.

With the production-ready Charters Towers Gold Project remaining in care and maintenance, the focus is on completing the major funding discussions in the near term and moving to gold production and revenue thereafter.

During the Quarter, the existing partly drawn loan facility was increased to A$1 million. The loan facility also included security over two mining leases. The interest rate of 12% per annum and maturity of 7 June 2021 remained unchanged.

The Company has the share placement flexibility to issue securities up to 15% annual placement capacity and may raise up to, or above, circa $2 million depending on the share price. The Company further has the ability to raise funds from the sale of gold in the ground and loan facilities as previously announced.

Development Funding

Activities during the Quarter continued to remain heavily focused on advancing discussions with strategic funding partners. With the recent strength in the US$ gold price, near US$1,500 (AU$2,220) per ounce, interest in our production-ready gold project has increased.
Annual General Meeting Held

The Company’s Annual General Meeting was held on 28 November 2019 with all resolutions passed.

We thank all shareholders for their continued support and will work diligently to further progress the growth of the business in 2020 and beyond.

CHARTERS TOWERS PROJECT OVERVIEW

Citigold is an Australian gold mining and exploration company, operating on the high-grade Charters Towers goldfield in north-east Australia, 1,000 kilometres north of Brisbane, Queensland, and 130 kilometres south-west from the major coastal port of Townsville.

The Charters Towers Gold Project is one of Australia’s largest high-grade pure gold deposits.

The Company does not require additional mine acquisitions to sustain long term gold production. Citigold has already invested over $200 million in acquiring the gold deposit and developing the infrastructure for mining at Charters Towers. Test mining operations have produced over 100,000 ounces of gold.

The Company is seeking to raise the required capital funding to complete the underground capital works. The business plan and capital expenditure program shows the gold production to commence within 12 months of the injection of the required capital.

SUMMARY OF MINING TENEMENTS & AREAS OF INTEREST

Citigold reports that the Consolidated Entity has a 100% control of the following mining tenements at Charters Towers as at 31 December 2019. During the Quarter, ML1549 was surrendered as redundant to our future needs.

**Cautionary Note:** This release may contain forward-looking statements that are based upon management’s expectations and beliefs in regards to future events. These statements are subjected to risk and uncertainties that might be out of the control of Citigold Corporation Limited and may cause actual results to differ from the release. Citigold Corporation Limited takes no responsibility to make changes to these statements to reflect change of events or circumstances after the release.

**Competent Person Statement:**

The following statements apply in respect of the information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves: The information is based on, and accurately reflects, information compiled by Mr Christopher Alan John Towsey, who is a Corporate Member and Fellow of the Australasian Institute of Mining and Metallurgy. Mr Towsey is a Chartered Professional (Geology) and currently independent of Citigold Corporation Limited, having previously been a Director of the Company from 2014-June 2016. He has the relevant experience in relation to the mineralisation being reported on to qualify as a Competent Person as defined in the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Identified Mineral Resources and Ore Reserves 2012. Mr Towsey has consented in writing to the inclusion in this report of the matters based on the information in the form and context in which it appears.
